

CELEBRATING LEGACY

In 1897, N.C. A&T's dairy unit opened with two cows and one spoon, for making butter. From producing food for the troops during World War II, to providing milk, butter and ice cream to campus dining until the 1960s, to training generations of animal scientists, the dairy has played a vital role in the community.

Today, we are the last HBCU in the country to still have a working dairy unit.

INSPIRING INNOVATION

At N.C. A&T, we're connecting small farmers to big data, unlocking the secrets of climate-smart soil, growing a niche for specialty crops and discovering ways to use food as medicine.
